

Chapter 1: Introduction to System & Network Administration

1. What is one of the main goals of system administration?
 - A. Designing software applications
 - B. Planning hardware purchases
 - C. Ensuring stable and secure IT operations
 - D. Writing network protocols
2. Which of the following distinguishes Unix-like systems from Windows systems?
 - A. Use of GUIs only
 - B. Absence of a file system hierarchy
 - C. Lack of command-line interfaces
 - D. Open-source philosophy and multi-user support
3. Which Linux distribution is known for stability and used primarily in servers?
 - A. Fedora
 - B. Debian
 - C. Arch Linux
 - D. Puppy Linux
4. What is the topmost directory in a Linux file system hierarchy?
 - A. /home
 - B. /usr
 - C. /root
 - D. / (root directory).
5. Which command is used to mount a file system in Linux?
 - A. mountfs
 - B. attach
 - C. mount
 - D. mnt
6. Which of the following commands is used to list files and directories in the shell?
 - A. ls
 - B. mv
 - C. cp
 - D. cd
7. Which command is used to start a new process in Linux?
 - A. init
 - B. exec
 - C. start
 - D. ps
8. Which of the following represents an advanced shell feature?
 - A. Changing directories
 - B. Basic file copy
 - C. Command substitution and scripting
 - D. File deletion

9. Which of the following best describes a Unix file system hierarchy?
- A. Multi-rooted with isolated trees
 - B. Single-rooted and seamless
 - C. Binary partitioned
 - D. Hierarchical with non-standard naming
10. Which command is used to change the ownership of a file in Linux?
- A. chmod
 - B. chown
 - C. ls -l
 - D. mv
11. What is the role of the init process in Linux?
- A. Load device drivers
 - B. Manage graphical interface
 - C. Initialize and manage system services
 - D. Format partitions
12. Which of the following is a key challenge in system administration?
- A. Hardware design
 - B. Managing user interfaces
 - C. Ensuring system uptime and performance
 - D. Writing application code
13. One primary goal of network administration is to:
- A. Eliminate all firewalls
 - B. Replace client systems
 - C. Run web browsers efficiently
 - D. Maintain secure and reliable communication
14. What is a common feature of modern operating systems?
- A. Multi-user support
 - B. Lack of memory management
 - C. Limited multitasking
 - D. Text-only interface
15. Which of the following is a Unix-like operating system?
- A. Windows 10
 - B. Ubuntu
 - C. MS-DOS
 - D. Android (Pre-Linux Kernel).
16. One difference between Unix and Windows systems is:
- A. Unix lacks a command-line interface
 - B. Windows has no file system hierarchy
 - C. Unix emphasizes scripting and CLI over GUI
 - D. Windows is open-source
